L. KRAEER FERGUSON, M.D., F.A.C.S.

With respect and affection, we dedicate this book to L. Kraeer Ferguson, M.D., F.A.C.S., widely known surgeon and Professor of Surgery at the College since 1946.

After completing his medical and surgical training at the University of Pennsylvania, Dr. Ferguson early became associated with the University Hospital and Philadelphia General Hospital. He served as Chief of the Surgical Out-Patient Department at the Hospital of the University of Pennsylvania and as Chief of Surgery at Philadelphia General Hospital.

Among his many honors are membership in the Philadelphia Academy of Surgery, Fellow of the

American College of Surgeons and the American Gastro-Enterological Association. Dr. Ferguson is a Diplomate of the American Board of Surgery and a Fellow of the College of Physicians of Philadelphia.

Dr. Ferguson is further distinguished as an author. In addition to his extensive publications in the journals of surgery, he is the author of *Surgery of the Ambulatory Patient*, an outstanding and well-known contribution to surgical literature.

During the thirteen years Dr. Ferguson has been at the College, he has trained many residents and instructed numerous students in the manifestations of disease and in fine surgical techniques.

Dr. Ferguson's warmth and friendliness have made him a familiar figure in the College and Hospital and have endeared him to his students. We shall remember the cholecystectomies, the gastrectomies, the vagetomies and the requirements for Board Certification in Retractor Holding, but, most of all, we shall remember "The Professor."

Dedication

THE OATH

SWEAR

by Apollo the physician and
Esculapius & Health & All-heal & all the gods & goddesses
that according to my ability & judgement

I WILL KEEP THIS OATH

& this stipulation—to reckon him who taught me this Art
equally dear to me as my parents to share my substance
with him & relieve his necessities if required to look upon
his offspring in the same footing as my own Brothers & to teach them this Art
if they shall wish to learn it

WITHOUT FEE OR STIPULATION

Teach by precept lecture & every other mode of instruction I
will impart a knowledge of the Art to my own sons & those of my
teachers & to disciples bound by a stipulation & oath

ACCORDING TO THE LAW OF MEDICINE

but to none others. I will follow the system of regimen which
according to my ability & judgement I consider

FOR THE BENEFIT OF MY PATIENTS

Sustain him whatever is deteriorous & mischievous. I will give
no deadly medicine to any one if asked nor suggest any such
counsel. In like manner I will not give to a woman a pessary to produce
abortion

**WITH PURITY & WITH HOLINESS I WILL
PASS MY LIFE & PRACTICE MY ART**

I will not cut persons laboring under the stone, but will leave this to be
done by men who are practitioners of this work. Into whatever houses
I enter, I will go into them for the benefit of the sick & will abstain from
every voluntary act of mischief & corruption. **AND FURTHER**
from the seduction of females or males of freemen & slaves.

Whatever in connection with my professional
practice or not in connection with it, I see or hear
in the life of men which ought not to be spoken
of abroad, **I WILL NOT DIVULGE**

as reckoning that all such should be kept secret.
While I continue to keep this Oath unviolated,
may it be granted to me to enjoy life & the practice
of the Art respected by all men in all times!

But should I trespass & violate this Oath,
may the reverse be my lot!

Ἱπποκράτης

Research

C. Krolczyk, Dr. Dratman, Dr. Eskin, Endocrinology.

The endocrine research group is investigating the role of ovarian hormones on thyroid activity. Results of the initial experiment are now pending publication,, while clinical experimental data were presented before the Philadelphia Endocrine Society last fall.

Dr. Butterfield, Dr. Chamberlin, Surgery

Study the effect of the adrenal cortical steroids on gastric secretions in the adrenalectomized dog attempting to discover in what way, quantitatively and qualitatively, the various adrenal cortical hormones affect the gastric acid secretions.

Dr. R. Miller, Department of Microbiology.

One of the research problems concerns the study of immune serum on the enzymatic activity of small particles isolated from *S. typhosa* 0.901. Incubation of the cells with glycine results in lysis in 16 hours and speeds of 20,000 x gravity sediment material with enzymatic activity.

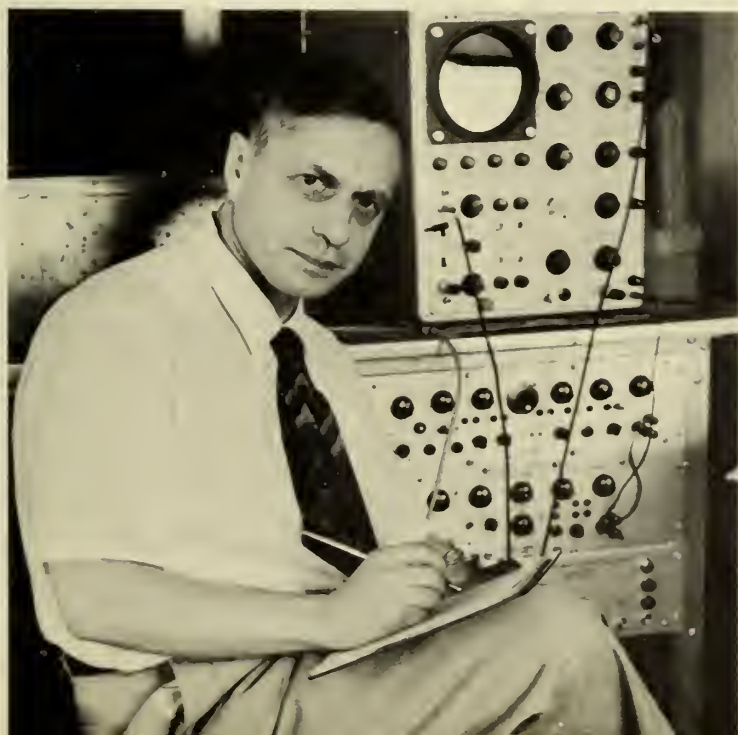

Dr. Biemiller, R. King, Senior Student, Gynecology.
Investigation of hormonal influences in vaginal cytology to include such aspects as the effects of pregnancy, threatened abortion and hormone replacement therapy on cell configuration and staining qualities.

Dr. Stillwell, Department of Anatomy.
Research in experimental studies of factors influencing cell division of embryonic cells grown in vitro. The work has been supported in part from grants from the American Philosophical Society and the American Cancer Society.

Dr. H. Shapiro, Department of Pharmacology.
An investigation of the effect of epinephrine, and acidity of the medium on axonal excitability, absolute and relative refractory, and conduction velocity in excised peripheral nerve.

Dean of the College

TO THE SENIORS

Perhaps no poet however great, has ever expressed the nostalgia of the graduating student any better than the words of the Whiffenpoof Song:

"We will pass and be forgotten with the rest."

Sung in proper harmony these lines always produce a catch in the throat and at least a brief yearning for Alma Mater wherever She may be.

For you, the class of 1959, I hope that you will think with affection of the four years you have spent at the Woman's Medical College. They have not been easy years, I know. They have brought hard work, problems, difficulties. For some of you they have meant sacrifice not only from yourselves but from your families—which is even harder to accept.

You stand now at the realization of your ambition, the attainment of your degree in medicine. But of course this is only the beginning. The years of promise stretch before you—joy in intellectual achievement, in the mental exercise of solving problems in laboratory, clinic or office; joy in the well-being of your patients; joy in service.

Please be sure that you won't "be forgotten with the rest." We will remember you, will rejoice in your success and will want to know what you are doing. Let us know about your internship, your residency, your practice. We want the medical students of the future to learn about the successes and triumphs of the members of the Class of 1959, so that they can follow in your footsteps—so that they like you:

"will be remembered with the rest."

WE SALUTE YOU

He bets on molecules

When William Bruce searches for new molecular formations in drugs, he knows he often plays a game of chance with the unknown. Dr. Bruce is one of an army of ceaselessly exploring scientists in his section of the Research and Development Division of Wyeth.

In these uncharted regions of organic synthesis, Dr. Bruce finds that compounds of great promise do not always result in clinical breakthroughs.

Take the case of WY-1292. This was one of a group of selenium analogues of cystine synthesized by Dr. Bruce and his associates in an effort to develop an improved agent for leukemia. After a score of derivatives of the parent com-

pound had been created and screened, clinical drawbacks were acknowledged. The process had consumed many man-hours of organized effort. Disappointment was natural. Antileukemic action had been successfully demonstrated, but leukemic cells were shown to acquire increasing resistance to the drug. So this is an agent you'll never see.

Every research scientist has a dogged instinct to penetrate nature's barriers. Dr. Bruce and his fellows at Wyeth are responsible for a constant flow of compounds, some of which represent victories in the obstetrics of research. These are the Wyeth drugs that permit improved care of patients.

THE FIRST HOURS OF TOMORROW

In what area of medical science will tomorrow's big "breakthrough" come? Virology? Coronary and renal disease? Mental health?

For the past 20 years we've watched research roll back one problem area after another. But research is already projecting today's accomplishments into tomorrow's benefits.

We can expect medical progress to continue as long as research recognizes today as the first hours of tomorrow.

S.K.F. Medical Color TV . . . an aid to postgraduate medical education

If all the programs presented on S.K.F. Medical Color Television could be assembled in one book, you would have at your finger tips the collective experience, in almost every field of medicine, of many of the world's most eminent physicians.

The continuing aim of S.K.F. Medical Color Television is to make available its facilities and technical skills to these physicians so that they can present to you, at medical meetings, the latest in medicine and surgery.

Before the end of our next decade in this medium, we hope that you will appear not only in the audience . . . but also in front of our cameras.
